

SHIP from Store

HOW DOES SHIP FROM STORE WORK?

Ship from Store is an app developed by OSF Digital, built to unify the inventory of your physical stores and online store by leveraging the capabilities of Salesforce Order Management, Salesforce Commerce Cloud, and the Store Associate App.

Using Ship from Store, customers place orders through your online store. These orders are then routed by Salesforce Order Management to the most appropriate physical store for fulfillment, based on merchandise availability, customer location, or other logistical operations.

It Starts with that Online Purchase
