Store LOCATOR
Help Customers Find You

PAVE THE WAY TO THE CLOSEST STORE!

Store Locator is a cartridge designed to provide enhanced store locator functionality for Salesforce Commerce Cloud. This **SFRA compatible** product enables customers to view a map containing detailed information on nearby stores and the distance from their location to the closest store.

Shoppers will be able to visualize the distance to your store(s) based on their current location, identified using their browser location. If shoppers don't provide their permission for their browser location to be used, the approximate location will be determined using **the Geolocation service provided by Salesforce Commerce Cloud.** A **search box** is available for shoppers to use to search for an address with the distance being displayed based on the final result.

FEATURES & BENEFITS

SFRA COMPATIBLE

Sore Locator is compatible with **SFRA**, Salesforce Commerce Cloud's new customization model and blueprint for site design.

DETECT LOCATION

Provide relevant details about the **nearest stores** by detecting a customer's whereabouts using their browser or Geolocation in case the customer doesn't provide access to their location.

SEARCH BOX

Allow shoppers to **search for stores** near a location different than their current location.

MANAGE STORES

Add and change the store's name, opening hours, address, coordinates and contact data directly in **Business Manager.**

STORE CARDS

Display cards containing **store information and distances** provided by Google Maps Distance Matrix API which is used to calculate the distance between the customer's location and the stores, sorted by the distance from the current address (detected or searched).

CUSTOMIZATION

Customize store information cards, path colors and shapes according to your **brand identity**.

MANAGE EVENTS

Detect and **manage present and future events directly in Business Manager**. Allow your customers to subscribe to an event and receive an email notification before the day of the event or print out related information.

VIEW OPTIONS

Implement a **variety of different views** including a full-screen map with information on top, a view presenting 50% of a map and 50% information, among other viewing options.
